

Booking Form Flow — Pairs, Service & Add-Ons

2026-09-16 · @Someone

This spec covers the booking form logic from selecting number of pairs through service type, add-ons, and checkout.

Flow diagram

```

flowchart TD
    Q1["Q1: How many pairs do you have?"] -->|"1-6 pairs"| LOOP
    Q1 -->|"7+ pairs"| QTY["Open number field: enter exact pair count"]

    QTY --> QUOTE["Custom quote form: contact info, pickup preference, notes"]
    QUOTE --> SUBMIT["Submitted → team follows up with a custom quote"]

    LOOP["Start at Pair 1"] --> SVC["Pair N: Select service type (3 buttons)"]
    SVC --> ADD["Pair N: Select add-ons, or tap 'No add-ons'"]
    ADD --> MORE{"Pair N+1 exists?"}
    MORE -->|"Yes"| SVC
    MORE -->|"No"| DONE["Checkout"]
  
```

Every button tap auto-advances to the next screen, except the Add-ons step: since multiple add-ons can be picked per pair, selecting an add-on does not auto-advance — only tapping “No add-ons,” or a “Continue” button once one or more add-ons are selected, moves you forward.

Step-by-step logic

1. **Question 1 — Pair count.** Show one question: “How many pairs do you have?” with clickable buttons for 1, 2, 3, 4, 5, 6, and 7+. Tapping any button auto-advances — no “Next” button.

2. **1–6 pairs selected → start the per-pair loop.** Set N = 1.

- Show “Pair N: What service are you looking for?” with 3 clickable buttons (service options — icons/photos to follow separately). Tapping a service button auto-advances.
- Go to “Pair N: Add-ons,” a multi-select screen — tapping an add-on does NOT auto-advance, since more than one can be chosen.
 - Tapping “No add-ons” advances immediately.
 - Once one or more add-ons are picked, a “Continue” button appears; tapping it advances.
- After add-ons is confirmed, increment N and repeat this step for the next pair.
- Once every selected pair has a service + add-ons, go to Checkout.

3. **7+ pairs selected → custom quote path.** Selecting “7+” opens a number input field so the user can type the exact pair count. After entering it, the form does NOT go into the per-pair service/add-ons loop — instead it shows a custom quote request form (contact info, pickup preference, notes) for the team to follow up with pricing.

4. **Pickup option.** For 7+ pairs, pickup preference is a field inside the custom quote form. For 1–6 pairs, pickup is not offered anywhere in the flow.

Assumptions & open questions

- **Custom quote form fields.** Assumed it collects at minimum contact info (name + phone or email) plus a pickup preference; confirm the exact field list with your team.
- **Add-ons are multi-select.** Assumed the user can pick more than one add-on per pair before “No add-ons” is treated as its own exclusive choice.
- **Service button content.** The 3 service buttons need labels/photos — to be sent separately.
